50 nesten
25 bedekt
25 open
11 juni en 24 juni

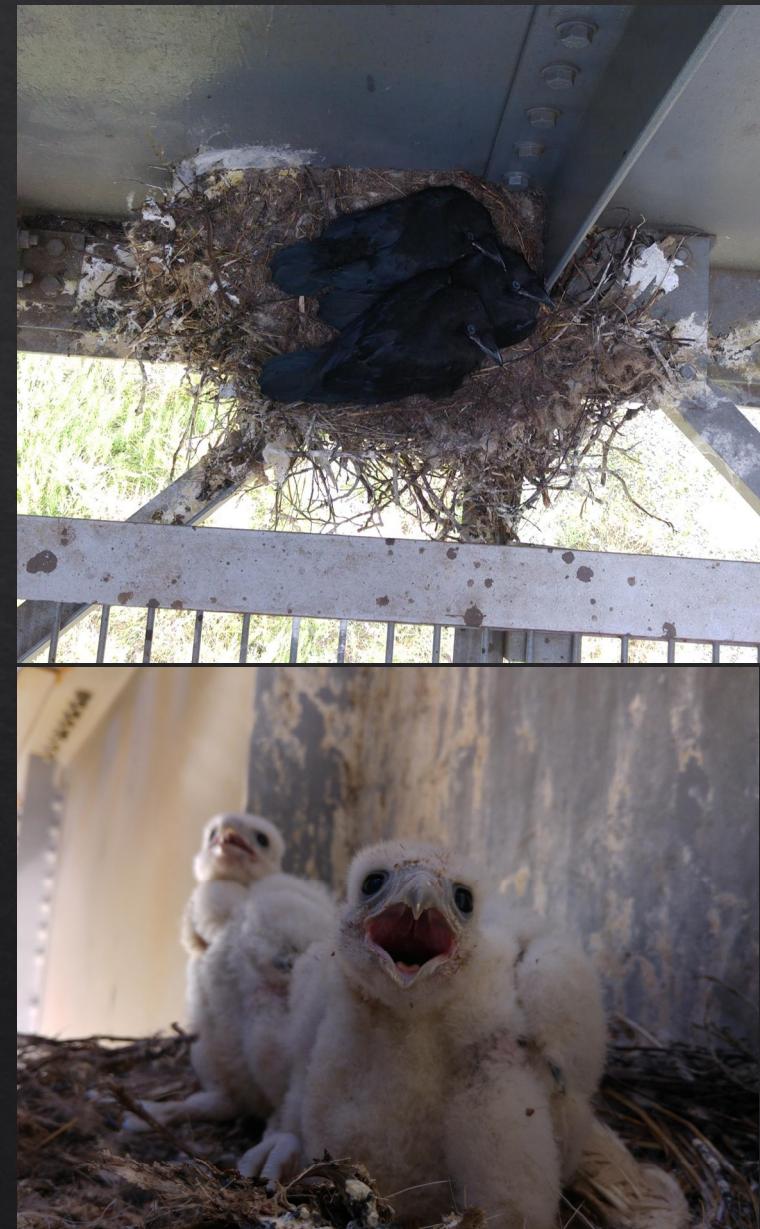

Nest monitoring Temmincks strandloper

Veranderingen

- ❖ Toendra verandert in Taiga
- ❖ Verandering in vogelsoorten?
- ❖ Opwarming Arctische gebied
- ❖ Icing
- ❖ Toename predatoren menselijk handelen?

De zin van Arctische veldwerk

A stoat stands in a field of low-lying green and brown vegetation, possibly a heathland or tundra. The stoat has a white underbelly and chest, and a brown back and head. It is looking directly at the camera with its ears perked up. The background is out of focus.
